Cheatsheet − Application Shortcuts

VIM

```
leader ............................. comma ,
C-I/C-O .................. next/last cursor pos
C-N ........................... open NERDTree
C-{J,K,L,H} ............... window navigation
space ................... code folding (for cpp)
[count] leader-cc ........... commenting line
[count] leader-cu ........ uncommenting line
```

Lanugage Client Neovim
```
compile_commands.json   in   project   root!
leader-lj ............................. STOP
leader-lk ............................ START
leader-ld ......................... definition
leader-lr ............................ rename
leader-lf ........................ formatting
leader-lt ........................... type def
leader-lx ...................... find references
```

Window Splitting
```
<leader>ws .................... horizontal split
<leader>w{+,-} .............. horizontal resize
<leader>wv ...................... vertical split
<leader>w{<,>} ................ vertical resize
```

Buffer Navigation
```
<leader><F5> ................. previous buffer
<leader><F6> ..................... next buffer
```

CMake & Make
```
<leader>cd .............. build in debug mode
<leader>cr ............ build in release mode
```

nvim-gdb
```
:h nvimgdb.txt .................... show help
<leader>d{d,l,p,b} .... start a new debugging
session
<M-b> (M=Alt) .......... Set/unset breakpoint
<F10> ..................... step over statement
<F11> ..................... step into statement
<F12> ................. step out current frame
<F9> .......................... print a variable
```

tmux

```
C-b + {H,J,K,L} ........... window navigation
```

Important files

```
Makefile
/vim/config.vim
```
